Binhai new area, Tianjin, China

Innovative furniture procurement

Photo: unsplash

- 2018 - green evaluation scorecard for school furniture procurement
- ambition based on investment in education and green facilities
- restructuring of award criteria to enable environmental performance covering the whole life cycle
- environmental performance 15% of the total assessment
- two contracts with a total value of 74,738 USD awarded to SMEs
- milestone contract for Binhai and Tianjin Municipality

EU Boost Energy Label Take-up

- 2021 - Roll out of new Energy Label for electronic appliances
- previous model was 'rescaled' (scale from A to G), now a product showing an A+++ energy efficiency class will, for example, become a B class

BELT project:

- to facilitate the transition period to the new rescaled label, informing and training all principal stakeholders and market actors
- to stimulate consumers to choose better energy performing products
- to stimulate manufacturers to research and to further improve their products, thus, stimulating innovation and investment.

> change of practice through next generation of eco-label

One planet
procure with care

Thank you!
